# Reconnecting Data Islands Across The Poultry Value Chain

In the agricultural industry, live production and manual data collection are plagued by unpredictability. Data is often fragmented and stored in functional silos, making information sharing challenging due to technological incompatibility.

Intelia addresses these challenges through our Poultry Information Management System (PIMS). By forging partnerships and adopting a collaborative approach to data acquisition and management, Intelia ensures that data is effectively utilized, regardless of its location. This approach empowers customers with flexible and always-relevant solutions that can adapt and evolve alongside their growth.

Covering Every Link of The Poultry Chain

Our poultry management system offers you a software package that provides insight into all relevant data within your poultry business or poultry integration. Whether you are just a part of the entire poultry chain or a fully integrated poultry company, we have the tools and expertise you need to succeed in today's competitive market.

Each module can be used independently and offers industry-specific functions:

- Dashboard
- Benchmarking
- Flock Management
- Results and Reporting
- Calamity Warning System

- Mobile App
- Task Management
- Document Archive
- Inventory Management
- Transport & Logistics

| Rearing | Parent Stock | Hatchery | Broiler | Layer | Feed Plan | Processing Planning |

FEATURES

Intelia's PIMS offers a centralized overview of your poultry value chain, allowing for efficient planning, organized business processes, and informed decision-making to drive your business forward. By streamlining operations and enabling efficiency processes, PIMS generates significant cost savings, contributing to the overall financial success of your poultry business.

✓ Can be accessed on any browser on all devices, as well as a mobile app.

✓ Financial tools ensure correct order processing, planning and costing.

✓ Dashboards and flocks tools to register, compare and analyse technical results of production.

✓ Enables paperless recording of vaccines, actions, tasks and all logistics transactions.

✓ Instantly view pop-up alerts for quick anticipation and cost savings.

✓ Benchmark tools to compare results.
