

FarmHub connects sensors, IoT, and agricultural equipment on the farm

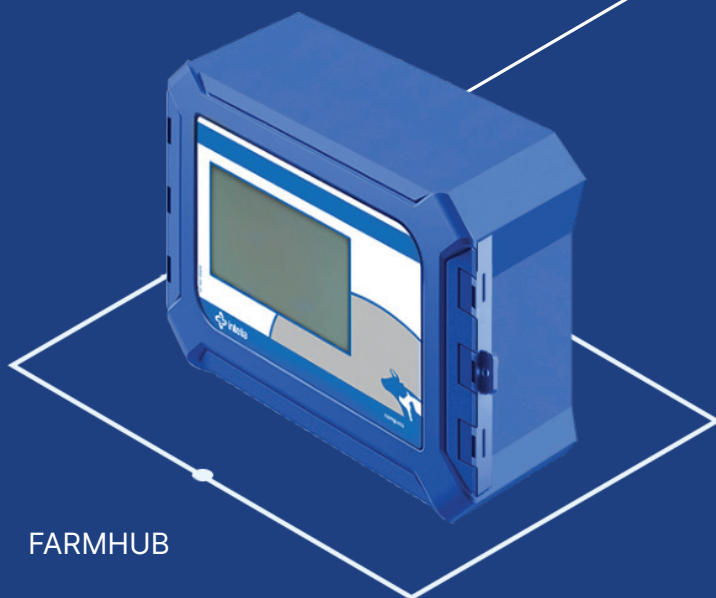

FarmHub is Inteliala's main gateway, capable of collecting data in all houses regardless of the source of data.

Available in both wireless and wired versions, our gateways enable real-time transmission to Inteliala's cloud.

SENSORS

The collected data is then processed and analyzed using Inteliala's powerful analytics, which employs advanced predictive models and machine learning to provide poultry producers with valuable insights and actionable information.

FARMHUB

FarmHub: Our Most Powerful Gateway

One FarmHub per house (when no compatible controller is installed)

Touchscreen for easy data viewing at the house

Allows for easy data entry such as mortality rate to eliminate paper trails

Designed for chicken house environment and deployed in the field since 2014

2-year warranty

Communication Devices

FarmHub seamlessly integrates with communication devices, such as Wi-Fi and 4/5G networks, to ensure reliable and robust connectivity throughout the farm.

By leveraging Wi-Fi technology, the FarmHub system enables real-time data transmission between other devices on the farm and the central gateway, optimizing equipment and data transmission costs and facilitating efficient monitoring of farm operations.

Additionally, the integration of cellular network connectivity enables reliable, accurate, and uninterrupted data flow for customers. Not having to worry about connectivity issues, farmers have access to key farm insights anytime, anywhere.
